shoe-horn

Product Type : Shoehorn  
 Specifications : W60×D60×H550 (mm)  
 Approximate weight-660g

Materials : Maple, Steel, Neodymium Magnet  
 Finish and Colors : Urethane / Urethane, Black

When you lift the top part of the cone, the shoehorn comes away like a conic section.

As the name suggests, shoehorns were first made by carving animal horns;  
 the shearing motion of the shoe-horn pays homage to its origins.

The shoehorn and stand, connected by an embedded neodymium magnet,  
 are carved from a single block of wood for complete continuity of the wood grain.

The shoehorn can be removed with one hand; the stand is weighted for proper resistance.
