

## HIROSHIMA / ARMCHAIR STACKABLE

This stackable armchair is notable for the lines running from the arms to the back. Looking as if it was carved out of solid wood, with beautiful gentle curves, this armchair provides exceptional fit with your back. Following the same lines of the HIROSHIMA Armchair in the same series, this chair was provided with a form in which the arms seem to melt into the back. This chair maintains its beauty even when viewed from behind or stacked, and the design achieves a harmony of the thin stainless steel legs with the solid wood parts. The ability to stack up to four chairs together makes this chair perfect not only for home use but also for use at public facilities and similar locations.

## DESIGN

Photo by Nacasa &amp; Partners Inc.

### NAOTO FUKASAWA , 2016 -

"The line leading from the arm to the back of the HIROSHIMA Armchair is distinctive, and it is a beautiful chair of solid wood that is carved three-dimensionally like a sculpture. Taking advantage of the same kind of line, the stackable chair and stool follow the connection between the back, the arm and the seat. It has been designed with the thought of wanting to make the shape beautiful as seen from the back. The appearance of the stool and stackable chair from behind was particularly important. The harmony between the narrow stainless steel legs and the solid wood is beautiful. "

## MATERIAL & FINISH

### beech

NL-0 whitish  
EC-1 matte black  
EA-1 matte white

### oak

C-0 clear  
NL-0 whitish  
NK-1 natural black  
OG-0 light gray

### walnut

C-0 clear  
WB-1 light brown

### stainless steel

chrome plated  
brushed  
black powder coated

## WARRANTY

We will guarantee the product for two years from the date of delivery of the product. For the content of quality assurance please see the "Warranty Policy" included in the product.

## TESTS

ISO7173-L4 / Determination of strength and durability  
ISO7174 / Determination of stability

## TECHNICAL INFORMATION

### WOOD

The wood used in this product is obtained from beech trees in Europe and oak or walnut trees in North America that are managed and felled in a planned manner. If required, we can manufacture furniture with the FSC® or PEFC™ certification. In that case, however, a longer lead-time will be required to procure the wood.

### UPHOLSTERY

The armchair seat is made of a combination of molded plywood and rubber sponge. The fabric model has loose covers, and the leather model is upholstered.

### METAL

The legs are made of stainless steel tubes. We apply four different surface finishing methods: chrome plated, brushed, black powder coated.\*The legs cannot be cut.

### GLIDE

The leg tips are equipped with polyethylene ball joint gliders. When the bottom parts get worn out, they can be replaced.

### VOC

The coating and glue used here reduce VOC emissions in manufacturing processes and finished products. These materials have been tested for formaldehyde emissions in accordance with the ISO12460 standard and confirmed not to exceed the 0.4 mg/l emission level.

## FLAME RESISTANCE

The product uses foam and materials that meet the requirements of BS5852 Source 5 as a standard feature.

## PURPOSE OF USE

### Indoor

Maruni Wood Industry has established various test standards and designs for comfortable use. However, the use of products beyond the expected scope can lead to cracking and snapping of wood parts. There are several things you should keep in mind in order to properly preserve the product and continue using it for a long time. Therefore, be sure to read the instruction manual beforehand.
