

Roundish / CHAIR

In addition to the shape, this soft and comfortable wood chair feels round no matter where you touch it. The rounded large backrest and seat snugly wrap around your body to provide secure and comfortable seating for the user. All the edges have been provided with gentle curves by skilled artisans so that the chair feels comfortable whether sitting straight up or at an angle, as well as to provide a snug fit with the chair and ensure comfort even if sitting for a long time. You can choose from three types of seats. The removable textile or leather seat attachments are designed so that they provide a sense of unity with the backrest and seat.

DESIGN

NAOTO FUKASAWA , 2011

"This chair with a roundish back and seat goes well together with tables with gentle shapes. Applying roundness to the contour edges of these pieces removes any sense of hardness from the chair. The primary feature of this chair is its large roundish back. It gently wraps around our body for increased sitting comfort, and it looks beautiful from behind in particular. The chair back encloses and supports you for hours of fatigue-free sitting, regardless of whether you sit up straight or slouch down. The curvature of the back closely matches the shape of the seat."

WARRANTY

We will guarantee the product for two years from the date of delivery of the product. For the content of quality assurance please see the "Warranty Policy" included in the product.

TESTS

ISO7173-L4 / Determination of strength and durability

ISO7174 / Determination of stability

TECHNICAL INFORMATION

WOOD

The wood used in this product is obtained from beech trees in Europe and oak or walnut trees in North America that are managed and felled in a planned manner. If required, we can manufacture furniture with the FSC® or PEFC™ certification. In that case, however, longer lead-time will be required to procure the wood.

UPHOLSTERY

The chair seat is made of a flame resistant polypropylene injection sheet combined with rubber sponge. The back is made of polypropylene combined with polyethylene sheets.

GLIDE

The leg tips can be equipped with polyethylene gliders, which are sold separately. You can choose between felt and plastic bottom parts.

VOC

The coating, glue, plywood, and MDF used here reduce VOC emissions in manufacturing processes and finished products. These materials have been tested for formaldehyde emissions in accordance with the ISO12460 standard and confirmed not to exceed the 0.4 mg/l emission level.

FLAME RESISTANCE

The Chair (cushioned seat) meets the requirements of BS5852 Source 5 as a standard feature.

PURPOSE OF USE

Indoor

Maruni Wood Industry has established various test standards and designs for comfortable use, however, use of products beyond the expected scope can lead to cracking and snapping of wood parts. There are several things you should keep in mind in order to properly preserve the product and continue using it for a long time. Therefore, be sure to read the instruction manual beforehand.
